20. This is the most large showroom in the city. ✗

This is the largest showroom in the city. ✓

Reading (15pts total) 15/15

Read the text and decide if the statements are true or false.

IT Equipment and Logistics

Logistics is an important part of the IT business because companies need to move equipment from suppliers to offices and customers. This can include laptops, monitors, printers, servers and other devices. If the equipment does not arrive on time, technicians may not be able to complete their work.

SmartTech provides IT services to companies in several cities. The company buys most of its equipment from international suppliers, but it also works with some local suppliers. The equipment is kept in a central warehouse until it is needed. When a customer places an order, the logistics team checks the inventory and prepares the shipment.

Keeping the right amount of inventory is not always easy. The company needs enough equipment for urgent orders, but it does not want to keep too many products in the warehouse. Some technology becomes outdated when new models are introduced, so storing large quantities can be expensive.

Transportation is another important part of the process. Most orders are sent by road because this is usually the most practical option. However, when a customer needs equipment urgently, the company may use faster transportation, even if it costs more.

The logistics team also needs to make sure that equipment is packed correctly. Some devices are fragile and can be damaged during transportation. Before sending a shipment, employees check the products, the delivery address and the number of items in the order.

Sometimes problems are unavoidable. A shipment may be delayed because of traffic or bad weather. When this happens, the logistics team contacts the customer and informs the technician about the new delivery time. Good communication helps the company solve problems and avoid bigger delays.

For SmartTech, effective logistics means having the right equipment in the right place at the right time. Good planning helps the company control costs while also providing a reliable service to its customers.

1. SmartTech gets all of its equipment from international suppliers. _F ✓
2. The company keeps equipment in a central warehouse before it is needed. _T ✓
3. SmartTech wants to keep as many products as possible in its warehouse. _F ✓
4. The company may choose a more expensive transportation option for urgent orders. _T ✓
5. When there is a delivery problem, the logistics team communicates with the people involved. _T ✓

4. Philip quit the team because he did not get enough praise and encouragement. **F** 
5. Philip worked long hours when he worked at a factory. **T** 

Writing (20pts total) 14/20

Write a paragraph of 80 words giving your personal opinion about decision making in business.

Topic: *Is it better to take risks or make safe decisions?*

In your paragraph, you should:

- Give your opinion and explain your reasons.
- Give at least one example.
- Use one first conditional.
- Use one second conditional.
- Use appropriate Business English vocabulary.

The make safe decisions are fundamental for all business. It defines direction.

In my opinion, take risk or make safe decisions depend on the type of business. This is defined after data analysis. It is better to take risk calculate.

First, takes risks can help new opportunities and competitive for the company.

Other reason is that the companies need innovative.

For example. Apple, took a risk when create new products like the iPhone.

If a company risk calculated, it will reap benefits.

If companies only make safe decisions, they will achieve some stability, but without growth.

In conclusion, take risks calculated is necessary to create new opportunities and have a competitive advantage.

Speaking (20pts total) 15/20

Answer the following questions. Give reasons and examples.

1. What is the most important factor when making a business decision? Why?
2. Would you take a big risk if it could help your company grow? Why or why not?
3. What would you do if you were the manager of a company that was losing customers?
4. If your company introduced a new technology, what would you do if some employees refused to use it?
5. Do you think companies make better decisions when they work as a team or when one person makes the final decision? Why?

Great job applying relevant business concepts, using a strong real-world example (Apple), and attempting advanced conditional structures like the first conditional ("If a company... it will..."). To improve, focus on basic word forms and subject structure: replace "The make safe decisions" and "takes risks can help" with gerunds ("Making safe decisions" and "Taking risks can create..."), fix past tense verbs in examples ("when it created..." instead of "when create"), and watch for missing parts of speech like using nouns instead of adjectives ("innovation" instead of "innovative", "advantage" instead of "adventure").
